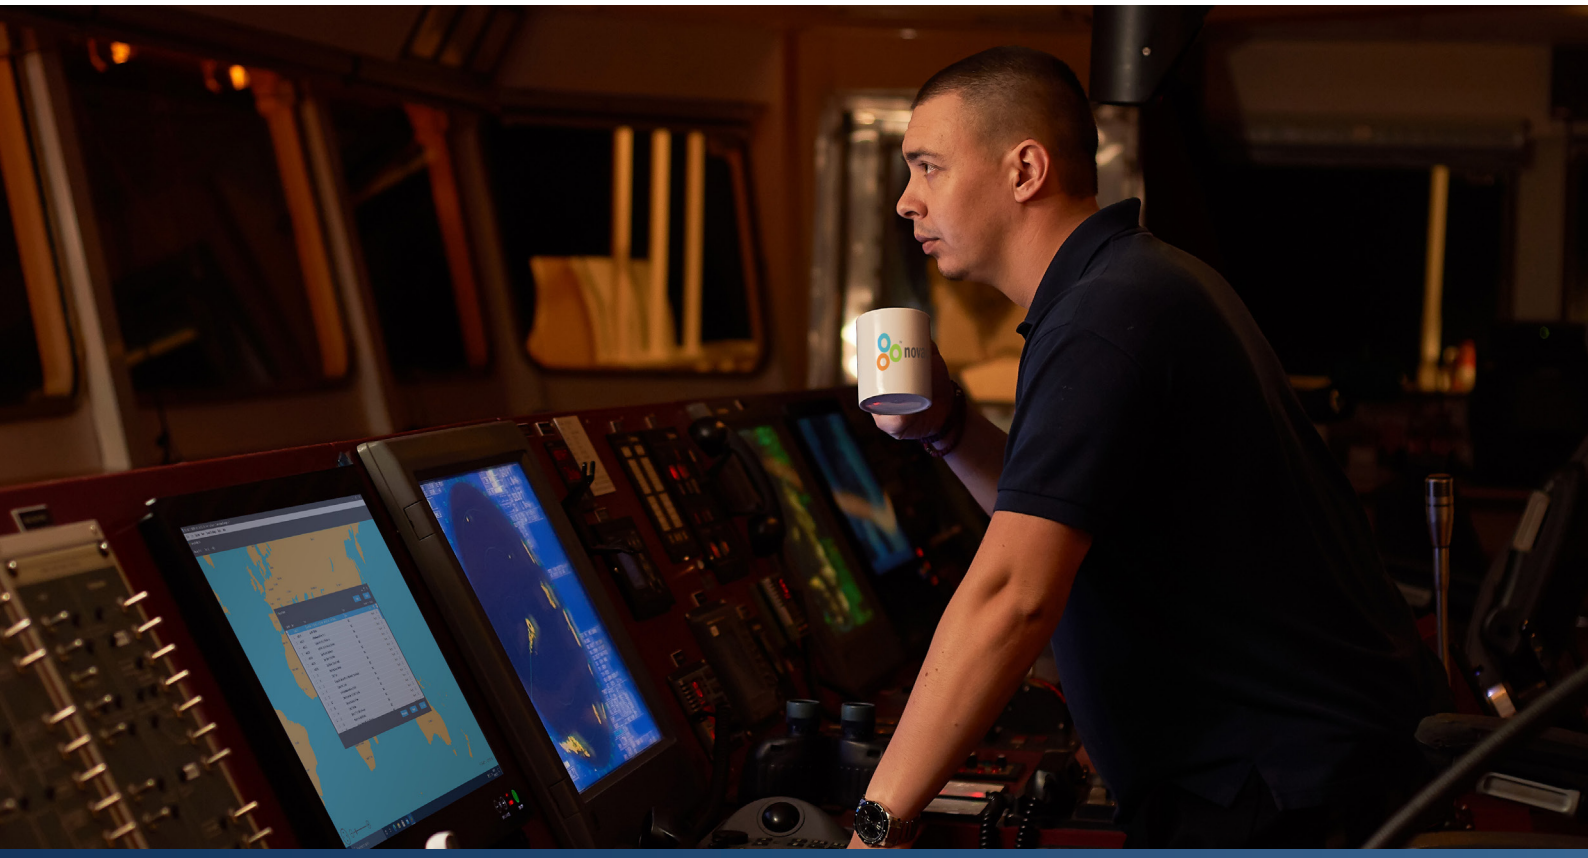
NovacoPlan

Plan to do less work

NovacoPlan is an efficient way to view or create detailed passage plans and understand optimised chart & publication requirements.



You'll love it when the plan comes together

- Included with NovacoBridge chartroom management suite.
- Use industry standard 'port to port' routing, import routes from your ECDIS or plot routes manually.
- Provides accurate ETAs and distance to destination - and more.
- Optimum chart and publication selection – paper or digital.
- Monitor and share plans with shore.

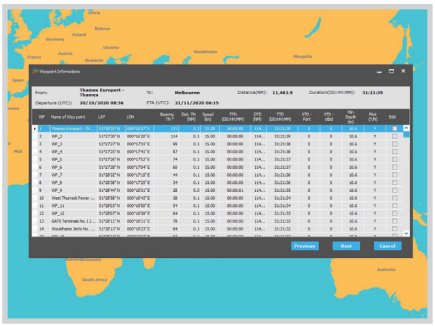
Passage planning made simple

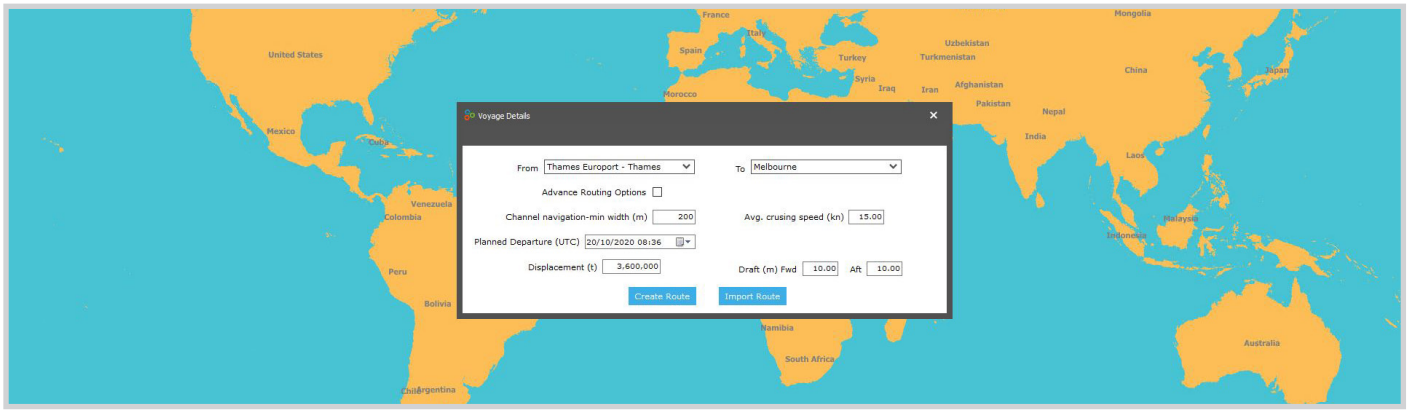
NovacoPlan enables officers to plan a route based on a range of industry-standard port-to-port routes.

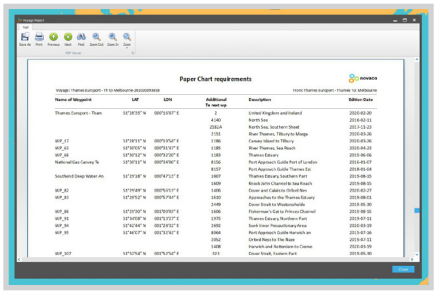
Alternatively the system also allows you to import a route from your ECDIS, or from point-to-point locations, using sophisticated and accurate plotting tools.

Standardised reports provide continuity in the passage plan reporting, and remove the need to manually fill out multiple pages of paperwork.

Passage plans can be shared with the shore-based teams for approval and record keeping.







Manage charts and publications

NovacoPlan ensures officers understand the charts and publications (additional to your current holdings) required for any voyage.

It optimises the selection of paper or digital charts and publications by using intelligent algorithms for each point on the route, so you pay only for the required charts and publications.

It also captures vital data such as NavArea warnings and T&Ps specific to the voyage.

Using vessel-specific information, NovacoPlan can provide:

- **Squat calculations.**
- **Waypoint data.**
- **Port information.**
- **Estimated time of arrival.**
- **Distance to destination.**
- **Under keel clearance (UKC) and more.**
